Generated on May 25, 2026

Introduction

Thank you for taking the time to review this SEO and website performance report. We've put this together to give you a clear, straightforward overview of how your website is currently performing online and where there's room to grow.

The score you'll see is out of 100 and reflects how well your site is optimised for search engines like Google. It's based on key areas such as website structure, loading speed, mobile friendliness, and keyword usage.

There is plenty of potential to improve your visibility and a great opportunity to boost your presence and start ranking higher for the keywords your ideal clients are searching for.

A high score doesn't always mean high rankings and this report isn't just about numbers, it's about real, actionable insights to help your business grow. We've been helping companies across the UK achieve better rankings and attract more customers since 2004.

If you'd like expert support in improving your online presence, we'd love to help.

✔ Title Tag

The Application Lab | University and Scholarship Application Mentorship

Length: 71 character(s) (512 pixels)

HTML title tags appear in browser tabs, bookmarks and in search results.

Since they are one of the most important on-page SEO elements, you should make your title tags between 20 and 70 characters including spaces (200 - 569 pixels). Make sure each page has a unique title and uses your most important keywords. For internal pages start your title tags with your most important keywords and ensure they are relevant to the page.

⚠ Meta Description

Personalised one-to-one mentorship for students from underrepresented backgrounds applying to world-leading universities and scholarships. Guidance on personal statements, research proposals, scholarship essays and interviews.

Length: 226 character(s) (1344 pixels)

Your meta description should be between 70 and 160 characters with spaces included (400 - 940 pixels).

A good meta description acts as an organic advertisement, so use enticing messaging with a clear call to action to maximise click-through rates. They allow you to influence how your web pages are described and displayed in search results.

Ensure that all of your web pages have a unique meta description that is explicit and contains your most important keywords (these appear in bold when they match part or all of the user's search query).

[The Application Lab | University and Scholarship Application Mentors...](#)

Personalised one-to-one mentorship for students from underrepresented backgrounds applying to world-leading universities and scholarships. Guidance on ...

Mobile Version

https://www.theapplicationlab.com

[The Application Lab | University and
Scholarship Application Mentors...](#)

Personalised one-to-one mentorship for students
from underrepresented backgrounds applying to
world-leading universities ...

This is a representation of what your title tag and meta description will look like in Google search results for both mobile and desktop users. Searchers on mobile devices will also see your site's favicon displayed next to the page's URL or domain.

Search engines may create their own titles and descriptions if they are missing, poorly written and/or not relevant to the content on the page and cut short if they go over the character limit. So it's important to be clear, concise and within the suggested character limit.

Check your title tag and meta description to make sure they are clear, concise, within the suggested character limit and that they convey the right message to encourage the viewer to click through to your site.

✓ Headings

<H1>	<H2>	<H3>	<H4>	<H5>
1	10	13	7	0
<H1>	Get into the world's top universities with mentors who have al...			
<H2>	We built this because the right guidance was never reaching t...			
<H2>	The support that actually moves your application forward.			
<H2>	We support applications across a wide range of scholarships, ...			
<H2>	From first message to first session, we handle the match.			
and 26 more.				

Great, your website is structured using HTML headings (<H1> to <H6>).

Use your keywords in the headings and make sure the first level (<H1>) includes your most important keywords. Never duplicate your title tag content in your header tag.

While it is important to ensure every page has an <H1> tag, only include more than one per page if you're [using HTML5](#). Instead, use multiple <H2> - <H6> tags.

Content Analysis

This data represents the words and phrases that your home page appears to be optimised around.

We use what's called "natural language processing" (NLP), which is a form of artificial intelligence that allows computers to read human language, to do this analysis.

The numbers next to each word or phrase represents how often we detected them and their variants on the page.

Are these the keywords you want to target for your page? If so, great! If these keywords aren't relevant to your page, consider updating your content to optimise it for your target keywords.

Alt Attribute

We found 5 images on this web page.

No ALT attributes are missing.

Alternative text allows you to add a description to an image. Since search engine crawlers cannot see images, they rely on alternative text attributes to determine relevance to a search query.

Alternative text also helps makes an image more likely to appear in a Google image search and is used by screen readers to provide context for visually impaired users.

Check the images on your website to make sure accurate and relevant alternative text is specified for each image on the page. Try to keep your alternative text to a simple, one-sentence description of what's in the image.

- Internal Links (59%)
- External Links: Follow (41%)
- External Links: NoFollow (0%)

Anchor	Type	Follow
View LinkedIn Profile →	External Links	Follow
View LinkedIn Profile →	External Links	Follow
Apply Now	External Links	Follow
LinkedIn Updates, op...	External Links	Follow
Instagram Behind the...	External Links	Follow

and 12 more.

Links pass value from one page to another. This value is called 'link juice'. A page's link juice is split between all the links on that page so lots of unnecessary links on a page will dilute the value attributed to each link.

There's no exact number of links to include on a page but best practice is to keep it under 200. Using the Nofollow attribute in your links prevents passing link juice, but these links are still taken into account when calculating the value that is passed through each link, so using lots of NoFollow links can still dilute PageRank.

✓ Language

Declared: *English*

Detected: *English*

Great, your declared language matches the language detected on the page.

Make sure your declared language is the same as the [language detected by Google](#).

Tips for multilingual websites:

- [Define the language](#) of the content in each page's HTML code.
- Specify the language code in the URL as well (e.g., "mywebsite.com/fr/mycontent.html").
- Use [hreflang tags](#) to specify language and country for Google, and the "[content-language](#)" [meta tag](#) to specify the language and country for Bing.

🔍 Web Feeds

We didn't find any web feed URLs on this web page.

A Web feed essentially enables visitors to receive information from your site without having to manually visit your website themselves. This allows you to consistently engage with your users, even when they are elsewhere.

Web Feeds can be used across a network of websites for product alerts, news, blog updates and more. Users can choose to subscribe to your content and receive notifications. Most multimedia content available on the web can be easily and efficiently distributed to your users using feeds.

The content would be delivered to the user in either RSS, ATOM, or JSON format. The aggregation of a web feed is the act of making a collection of web feeds available on one page. Adding a web feed depends on the CMS you're using. Check with your CMS for specific instructions or speak to our team.

✓ URL Resolve

Great, a redirect is in place to redirect traffic from your non-preferred domain.

All versions of your page point to the same URL.

URL	Resolved URL
http://theapplicationlab.com/	https://www.theapplicationlab.com/
http://www.theapplicationlab.com/	https://www.theapplicationlab.com/
https://theapplicationlab.com/	https://www.theapplicationlab.com/
https://www.theapplicationlab.com/	https://www.theapplicationlab.com/

Search engines see www.theapplicationlab.com and theapplicationlab.com as different websites. This means they could see a large amount of [duplicate content](#), which they don't like.

Fortunately your website redirects www.theapplicationlab.com and theapplicationlab.com to the same site.

✗ Robots.txt

Your site doesn't have a robots.txt file.

A robots.txt file allows you to restrict the access of search engine crawlers to prevent them from accessing specific pages or directories.

They also point the web crawler to your page's XML sitemap file. Your site currently has a robots.txt file. You can use Google Search Console's Robots.txt Tester to submit and test your robots.txt file and to make sure Googlebot isn't crawling any restricted files.

✖ XML Sitemap No sitemap found in your robots.txt.

XML sitemaps contain the list of your URLs that are available to index and allow the search engines to read your pages more intelligently. They can also include information like your site's latest updates, frequency of changes and the importance of URLs.

Be sure to only include the pages you want search engines to crawl, so leave out any that have been blocked in a robots.txt file. Avoid using any URLs that cause redirects or error codes and be sure to be consistent in using your preferred URLs (with or without www.), correct protocols (http vs. https) and trailing slashes. You should also use your robots.txt file to point search engine crawlers to the location of your sitemap.

🔍 URL Parameters Perfect, your URLs look clean.

URL parameters are used to track user behaviors on site (session IDs), traffic sources (referrer IDs) or to give users control over the content on the page (sorting and filtering). The issue with URL parameters is that Google sees each unique parameter value as a new URL hosting the same thing - meaning you could have a duplicate content problem.

Sometimes, it's able to recognise these URLs and group them together. It then algorithmically decides which URL is the best representation of the group and uses it to consolidate ranking signals and display in search results.

You can help Google recognise the best URL by using the rel="canonical" tag. Use the URL Parameters Tool in Google Search Console to tell Google how your URL parameters affect page content and how to crawl URLs with parameters. Use this tool very carefully - you can easily prevent Google from crawling pages you want indexed through overly restrictive crawling settings, especially if you have URLs with multiple parameters.

✔ Canonical Tags We didn't find any canonical URLs on your page. It is, however, strongly recommended to add a self-referencing canonical tag when possible.

A canonical tag, also called "rel canonical" is an HTML tag that tells search engines that the enclosed URL is the original, definitive version of the page. Practically speaking, it tells Google which page you want to appear in search results. Search engines see different URLs as different pages, even if they are serving the same purpose. Having multiple versions of a page might cause you to suffer issues with duplicate content.

Implementing a canonical tag can be done through the <link> tag in the <head> or through HTTP headers.

✔ Robots Tags We did not find any robots meta tags in your website.

The robots meta tag gives you control over the content search engines are able to index and display to users. Although not necessary to have on each page, it is highly recommended to include robots tags so you can control how your content is delivered.

You can implement your robots tag either as an HTML tag in the head element of your page, or by using an X-Robots-Tag in the HTTP Header response. You can use both approaches to specify instructions to one particular search engine, or any other search engine visiting and crawling your site.

👁 Index and Follow This page is set to 'index' and 'follow'

Noindex and nofollow are HTML meta tags that guide search engine crawlers. A 'noindex' tag excludes a page from search results, while 'nofollow' prevents crawlers from following links on a page, halting the transfer of authority to linked pages. These tags help manage visibility and avoid outdated or irrelevant content from being served to potential visitors who might get little value out of it.

✔ Broken links No broken links were found on this web page

Broken links send users to non-existent web pages. They hurt a site's usability and reputation, which impacts SEO. Fortunately your page doesn't contain any broken links. Be proactive in checking your pages to make sure they don't have any broken links.

✔ Underscores in the URLs Great, you are not using underscores (these_are_underscores) in your URLs.

Great, you aren't using [underscores](#) (these_are_underscores) in your URLs.

Google sees hyphens as word separators while underscores aren't recognized. So the search engine sees [www.example.com/green_dress](#) as [www.example.com/greendress](#). The bots will have a hard time determining this URL's relevance to a keyword.

✓ Mobile Friendliness Very Good

This web page is super optimized for Mobile Visitors

Mobile friendly pages make it easy for users to complete objectives and common tasks and use a design or template that is consistent across all devices (uses responsive web design).

Your site is well configured for mobile users.

👁 Mobile Rendering

This is how your website appears when displayed on different mobile devices.

With more than half of all Google search queries originating on a mobile device, it is important to make sure your mobile site is optimized for these users.

Schema.org

We didn't detect any schema.org items on your webpage

Structured data (often added using Schema.org vocabulary) helps search engines better understand the content of your website. It can enhance your appearance in search results with features like rich snippets, which can lead to higher click-through rates and improved visibility.

Schema markup can be added in various formats such as JSON-LD, Microdata, or RDFa, and is used to define things like products, reviews, services, people, and more. While not mandatory, adding structured data is considered a best practice for SEO and usually helps to boost your rankings.

To learn more, visit [Google's Structured Data Markup Helper](#) or speak to our team.

✓ SSL Secure

Great, your website is SSL secured (HTTPS).

- ✓ Your website's URLs redirect to HTTPS pages.
- ✓ Your website is configured with [HSTS](#).
- ✓ The SSL certificate expires in 2 months.
- ✓ The certificate issuer is Let's Encrypt.

Modern websites tend to be SSL secured (HTTPS) as it provides an extra security layer while logging in to your Web Service. Google has confirmed that an HTTPS (vs HTTP) website now receives an extra boost in their ranking.

While switching to HTTPS, make sure your site remains optimised and see to it that your website will still run quickly. Follow these best practices for a smooth transition:

- Use a serious issuer to purchase your SSL certificate
- Redirect all of your HTTP pages to the HTTPS version of your website
- Use HTTP Strict Transport Security (HSTS) in your headers
- Renew your SSL certificate every year, before it expires
- Make sure that all of your content (CSS, etc.) is linked to HTTPS
- Update your XML sitemap to ensure the URLs include HTTPS and update the robots.txt file to reference this version
- Register the HTTPS website in Google & Bing Search Console/Webmaster Tools

Using an SSL certificate creates an encrypted connection between your visitor's browser and your website's server adding an extra layer of security. Google now uses HTTPS as part of their ranking algorithm and if your website is not HTTPS, it will likely rank below your HTTPS competitors.

✓ Mixed Content

We didn't find any mixed content on this web page.

Mixed content occurs when a URL is loaded over a secure HTTPS protocol, but other resources on the page (such as images, videos, stylesheets, scripts, etc.) are loaded over an insecure HTTP connection. Modern browsers may block this content, or may display warnings to the user that this page contains insecure resources which causes them not to view your page.

✖ Image Optimization

This page has not passed all 5 checks

- ✓ All images are efficiently encoded
- ✓ All offscreen images have been deferred
- ✗ Some images are not using next-gen formatting
- ✗ Some images are not properly sized
- ✗ Some images do not have explicit dimensions

Image optimisation plays a key role in website performance, SEO, and user experience. Optimised images load faster, reduce page size, and improve accessibility, all of which contribute to better search rankings and a smoother experience for visitors.

Best practices include using appropriate file formats (like WebP or compressed JPEG/PNG), reducing file sizes without sacrificing quality, and adding descriptive ALT text to support accessibility and help search engines understand the image content.

Regularly reviewing and optimising your images can help your site load more quickly and perform better across all devices.

Technologies

Server IP 185.199.109.153

Server location: 🇺🇸 San Francisco (South Beach)

Your server's IP address has little impact on your SEO. Nevertheless, try to host your website on a server which is geographically close to your visitors. Search engines take the geolocation of a server into account as well as the server speed.

Technologies

Fastly

GitHub Pages

Google Font API

Microsoft 365

Ruby

Ruby On Rails

Varnish

Get to know the technologies used for your website. Some codes, platforms, apps or plugins might slow down your website. Speak to our team if you would like us to take a look at this.

Analytics We didn't detect an analytics tool installed on this website.

Analytics allows you to measure and track visitor activity on your website. You should have at least one analytics tool, but it makes sense to have a second so you can cross-check the data.

Doctype HTML5

The Doctype is used to instruct web browsers about the document type being used. For example, what version of HTML the page is written in.

Declaring a [doctype](#) helps web browsers to render content correctly.

Encoding Great, language/character encoding is specified: utf8

Specifying [language/character encoding](#) can prevent problems with the rendering of [special characters](#).

URL

theapplicationlab.com

Length: 17 character(s)

Keep your URLs short and clean and avoid long domain names when possible.

A descriptive URL is better recognised by search engines. A user should be able to look at the address bar and make an accurate guess about the content of the page before reaching it (e.g., <http://www.mysite.com/en/products>).

Keep in mind that URLs are also an important part of a comprehensive SEO strategy. Use clean URLs to make your site more "crawlable" by Google.

Search for a good domain name. If no good names are available, consider a second hand domain. To prevent brand theft, you might consider trademarking your domain name.

 **Favicon** Your website does not have a favicon.

Favicons are the small icons that represent a website, company and/or brand. They can be displayed (among other instances) in browser tabs or bookmarks.

Google also displays favicons in a page's search snippet in mobile search results. You can see how your site's favicon appears in search results in the Google Preview above. Make sure your favicon is consistent with your brand to help improve visibility.

 **Custom 404 Page** Great, your website has a custom 404 error page.

Your server responded with the HTTP status code: **404**

[Custom 404 error pages](#) are an opportunity for you to reduce customer frustration and link to other pages on your site.

- Domain Registration

Created a year ago

Expires in 2 years

Your domain, theapplicationlab.com, is the human-readable address of your website on the Internet.

Domain age and registration won't impact a website's rankings, but it's important to keep your registration up to date to prevent someone else from buying it.

- Domain Availability

Domains	Status	
theapplicationlab....	Available. Register it now!	✓
theapplicationlab.o...	Available. Register it now!	✓

theapplicationlzb.c...	Available. Register it now!	✓
theappliicationlab....	Available. Register it now!	✓

and 2 more.

[Register](#) the various typos of your domain to protect your brand from [cybersquatters](#).

Traffic Estimations Very Low

This shows your estimated traffic for theapplicationlab.com. We use [Majestic Million](#) and [Open Page Rank](#) for this information.

Traffic Rank Global rank too low to be calculated

TLD rank too low to be calculated

This shows the global traffic rank and the [Top Level Domain](#) (TLD) rank for this website; the lower your rank, the more visitors this website gets.

We use [Majestic Million](#) and [Open Page Rank](#) for this information.

Local Directories

Missing profile on Google My Business

Missing profile on Yelp

This is a list of local business directories where your company has been found, these play an integral part of your SEO strategy and can help to drive a significant number of visitors to your website.

If a profile is showing as missing (for example Google Business), but you have it set up, it usually means that the 'name' and 'address' have not been defined in the Schema markup on your website and Google has been unable to associate the profile with your website.

Using Schema markup tells search engines where to find your business profiles, simply linking to the profile from your website will help Google find the page, but it won't tell them that the profile is for your specific website, company or brand.

Online Reviews

No local reviews found.

These are the latest reviews of your business that can be found in local directories. Surveys show that 90% of customers say buying decisions are influenced by online reviews so take the time to make a good impression and gather positive feedback.

Strategies for gaining reviews may differ by audience or business type; in general, consider asking for reviews, make it easy for customers to provide feedback and have a prominent social presence.

Social Profiles

✓ Discovered Profiles

We found the following social profiles on your website:

<https://www.instagram.com/theapplicationlab>

<https://www.linkedin.com/in/kanupriya-sharma-phd-7b128548/>

Listing your social media profiles on your website is important because it allows potential customers, clients, or followers to easily find and connect with your business on various platforms. It helps to increase your online presence and visibility, as well as build trust and strengthen the relationship with your audience by providing them with multiple ways to engage with your brand.

Certain social media platforms may be more important for certain types of businesses than others because each platform has its own unique user base and features that may be better suited for certain industries or marketing strategies. For example, Instagram and Pinterest are mostly visual platforms that are ideal for businesses in the fashion, beauty, and home decor industries, while Facebook and Twitter/X are more general-purpose platforms that can be used for a wide range of businesses.

It's important for businesses to research the demographics and features of each platform to determine which ones will be the most effective for their specific industry and marketing goals.

🔍 Facebook Page

Not found

Facebook pages are crucial for a brand's digital marketing strategy. Nearly all millennials expect brands to have a presence on Facebook.

Use Facebook's Audience Insights to track audience engagement and make the most of your social media efforts. Connect your Facebook profile with your domain and add a call-to-action to maximise your social media marketing results.

🔍 Twitter Account

Not found

Having a Twitter/X account is vital for reaching a large audience. With 300+ million users worldwide, a presence on X can greatly benefit your brand.

Additionally, there is a positive correlation between social media use and education and household income. By creating an X account and linking it with your website, you can prevent brandjacking and make your social media marketing more effective. Use Twitter Dashboard and Analytics to track and optimise your feed for valuable engagements.

- 🔍 Instagram Account We found <https://www.instagram.com/theapplicationlab> on your webpage. If this is your account, add it to your structured data.

An Instagram account is a major asset for your brand's digital marketing efforts. With over two billion people who use Instagram once a month, you have a large audience to reach through your content. Use your Instagram presence to gather insights for your marketing strategy.

- 🔍 LinkedIn Account We found 3 LinkedIn URLs on your webpage. Is one of them your account? Add it to your structured data.

<https://www.linkedin.com/in/kanupriya-sharma-phd-7b128548/>

<https://www.linkedin.com/in/vishalnarula99/>

<https://www.linkedin.com/company/theapplicationlab>

Having a LinkedIn account is important for building professional networks and connections. LinkedIn offers the ability to tap into existing connections and expand your brand through word-of-mouth. Having a LinkedIn Company Page helps people learn about your business and brand.

- ✖ Social Media Engagement Your homepage has not been widely shared on social networks.

What Our Clients Say

We have been helping businesses get found on Google since 2004, take a look at what our clients are saying below.

13 hours ago

Best move we ever made

We were almost at the point of giving up as every company we used cost us a small fortune and never delivered. I'm so glad we chose to give it one more try and used total seo it's the best thing we have ever done. Our seo keeps on moving forward so we decided to go with google ads as well we are now getting calls every day and out ROI is brilliant thank you so much to Ben our account manager couldn't thank you enough.
